## Supplemental Information

### Supplementary Information SI1.

Supplementary Information SI1. Morphometry of 281 skinned fisher carcasses by population, sex, and age class collected from throughout British Columbia, Canada, 1989-1993. Measurements with significant differences between populations, when controlled for age class and sex, are shown in bold. Juvenile age class includes fishers <1 yr, Subadults were <2 yr, and Adults were ≥2 yr. Values are shown as  $\bar{x}$  (SD, n).

## Supplementary Information SI2.

Supplementary Information SI2. Morphometry, by population, sex, and age class, of 105 fishers live-captured from throughout British Columbia, Canada, 1996-2023. Measurements with significant differences between populations, when controlled for age class and sex, are shown in bold. Juvenile age class includes fishers <1 yr, Subadults were <2 yr, and Adults were ≥2 yr. Values are shown as  $\bar{x}$  (SD, n).
